

2008 Integration

System Benefits

- Fully Integrated with SolidWorks 2008 as a one window solution
- Creates a single part repository of all your company's models
- Graphical searching is quick and allows multi-user operation
- You can search for parts by number, name or description
- Parts in the repository can be loaded back into SolidWorks for further inspection/modification
- The repository can be easily maintained with the 'One Button Add'
- Re-use implies large cost savings as tooling, materials and stocks can be reused
- Avoiding design from scratch saves designers' time and reduces design lead times

What's New

CADFind Sketch & Search has been developed to allow **full integration** with SolidWorks 2008. **CADFind** is a program addin and is accessible inside SolidWorks, allowing immediate access to search or add to your drawing repository at all times.

You can search using a detailed or simplified model as well as a 2D sketch. Searches are fast and accurate, more details can be found on our website: www.sketchandsearch.com

System Application

- Design Re-use
- Company Part Catalogues
- Standardisation initiative
- Job quotations and planning

System Operation
